

Big Fix Advanced Content and Relevance

Course Summary

Description

Students work in groups to solve several challenges requiring them to use the Relevance and action script covered in the AIS BigFix Content & Relevance course lectures and lab exercises. Content from each group is compared for results, most efficient relevance/action script code and execution time.

Audience

This course is for students wanting to learn BigFix policy language known as Relevance.

Prerequisites

You should have a basic understanding of the following:

- Basic Microsoft Windows
- Basic Coding skills
- Previously taken the AIS BigFix Content & Relevance course, or equivalent hands-on experience writing Relevance
- Students must take class from a home office on a personal computer to ensure government firewalls do not block access to lab environments

Duration

One day
